The subtitle of this accessible guide to facilitation, "Practical Wisdom For Developing Effective Groups", accurately describes the book’s scope and utility. In four parts and thirteen chapters, Schwarz provides an overview, with countless meaningful examples, of how facilitators can most effectively help groups develop their capacity for improvement. He distinguishes between two types of facilitation: (1) Basic facilitation, which aims to help a group "solve a substantive problem"; and (2) Developmental facilitation, which accomplishes basic facilitation while helping a group learn "to improve its process". He argues that three core values underlie effective group and facilitator behavior. The first is "valid information", which means that relevant information is shared by group
members and that all groups members can validate and understand the information. The second is "free and informed choice", which means that group members define their own goals and methods of achieving those goals using valid information. The third is, "internal commitment to the choice", which means that group members take responsibility for their decisions by making informed choices based on valid information. Using a basic or developmental approach, facilitators most effectively intervene by making explicit and modeling these core values. These values are maintained by a group agreeing and sticking to essential ground rules, which Schwarz lists on p. 75 and treats extensively throughout the book. In the heart of Schwarz’s book are seven chapters on intervening effectively in groups. In those chapters, he advises the reader on, among other things, how to intervene, meeting management, group problem-solving, following ground rules, and dealing with emotions.
