As a student of geography, I was given the opportunity to do some shoreline management work for the local county. Although I had taken some classes regarding shorelines, I needed a crash course in coastal management, and I was pointed to this book. Within two days, I knew as much as I needed to know about coastal issues. The book covers a wide variety of issues, ranging from the history of coastal population concentration, environmental issues, private property rights, and zoning and other useful information for the planner. This book gave me a great introductory knowledge, and was able to satisfy most of my questions. I recommend this book to anyone who thinks they may be
interested in Shoreline Management, City or Urban Planning, or Environmental or Population issues.

Now in a second edition with updated statistics, references to legislation, discussions, and new knowledge about creative coastal design, and collaboratively written by Timothy Beatley (Professor, Department of Urban and Environmental Planning, University of Virginia), David J. Bower (Research Professor, Department of City and Regional Planning, University of North Carolina, Chapel Hill); and Anna K. Schwab (Research Associate, Department of City and Regional Planning, University of North Carolina, Chapel Hill), An Introduction To Coastal Zone Management is a scholarly and comprehensive look at the complex problems of environmental management of coastal areas. Written for students and professionals, An Introduction to Coastal Zone Management covers a wealth of topics including shoreline erosion, lake stratification, coastal sprawl, and much, much more. An Introduction To Coastal Zone Management is very highly recommended reading for anyone with a determined interest in the field and an essential addition to Environmental Studies academic reference collections.
