Most people know about mind-mapping already. Do you use it yourself as well? I am sure most people use or have used the technique in one form or the other. The reason it works so well is because it makes use of both sides of your brain, taking the slightly more analytical left side and using words and relationships. It also benefits from the slightly more creative or colourful right side, using images and colours. This book is great. I wish someone had given me this book when I was at school. Its really easy to follow and before you know it your kids will be drawing colourful spider

diagrams full of facts that help them with their school work. Do you want to help them in ace-ing their tests at school? If so, you should definitely read this book, as there are amazing things your child can learn from it! After reading this book, you will be a personal mind-mapping coach for your child. Great job D.D. Tai.

Mind Mapping for kids is a great little book that's also a great guide on positive, creative thinking for children, it keeps them thinking and evolving from the current mindset. It's a lovely book and i recommend it to parents that expect their children to shine at school and do better in general.
