Dark Winter: How The Sun Is Causing A 30-Year Cold Spell

Synopsis

Climate change has been a perplexing problem for years. In *Dark Winter*, author John L. Casey, a former White House national space policy advisor, NASA headquarters consultant, and space shuttle engineer tells the truth about ominous changes taking place in the climate and the Sun. Casey's research into the Sun's activity, which began almost a decade ago, resulted in discovery of a solar cycle that is now reversing from its global warming phase to that of dangerous global cooling for the next thirty years or more. This new cold climate will dramatically impact the world's citizens. In *Dark Winter*, he provides evidence of the following:

- The end of global warming
- The beginning of a "solar hibernation," a historic reduction in the energy output of the Sun
- A long-term drop in Earth's temperatures
- The start of the next climate change to decades of dangerously cold weather
- The high probability of record earthquakes and volcanic eruptions

A sobering look at Earth's future, *Dark Winter* predicts worldwide, crop-destroying cold; food shortages and riots in the United States and abroad; significant global loss of life; and social, political, and economic upheaval.

Book Information

Hardcover: 190 pages

Publisher: Humanix Books (August 19, 2014)

Language: English

ISBN-10: 1630060356

ISBN-13: 978-1630060350

Product Dimensions: 6 x 0.6 x 9.3 inches

Shipping Weight: 14.4 ounces (View shipping rates and policies)

Average Customer Review: 4.2 out of 5 stars [See all reviews](#) (315 customer reviews)

Best Sellers Rank: #48,430 in Books (See Top 100 in Books) [#27 in Books > Politics & Social Sciences > Politics & Government > Public Affairs & Policy > Environmental Policy](#) [#30 in Books > Science & Math > Earth Sciences > Rivers](#) [#41 in Books > Science & Math > Earth Sciences > Climatology](#)

Customer Reviews

As the subtitle indicates, Casey predicts a 30-year cold spell, beginning very recently. If you live in North America anywhere east of the Rocky Mountains you probably saw enough winter last year to concede that he might have a point. His calculations are based on solar cycles. A couple of years ago the publishers of the *Olde Farmers Almanac* stated for publication that their method of

predicting weather is based on 11 and 22-year sunspot cycles, and has had essentially the same prediction method for more than 2 centuries. At that time the official weather office predictions were based on fluid mechanics. The original researchers on Chaos Theory showed conclusively that the fluid mechanics theory had an absolute maximum usefulness of 23 days. Beyond that time it is totally useless. The weather office claimed that the Farmers Almanac method was unscientific. I disagreed with that position on the basis that the two prediction methods should be judged on the accuracy of their results, not the horsepower of their computer sections. About 20 years ago the Farmers Almanac was more accurate for weather more than about a week in the future. With advances in satellite technology this breakpoint may have been extended another few days. Casey has done his homework. He is actually a scientist, not a politician, and every page of his book shows it. He proceeds in the scientific manner. His figures show, as do most similar researchers, that there are strong weather cycles of about 100 years and about 206 years. These strongly indicate a cold period ahead, with the coldest part in about 2030. He quotes figures from other researchers. Most of these are in general agreement. I note that he quotes several Russian researchers.
