I loved Jawad's work and the effort he poured into making this book a real piece of art. It not only dives into the business processes in each type of production planning but it also covers key configuration details within each type. A must read for all levels of super-users and consultants!! Keep up the good work, Jawad..

this is an excellent writing on a topic which is often implemented ineffective. Jawad strikes a chord when exploring the different production types and gives a very useful explanation on when to use process, discrete or repetitive manufacturing. I wish there would be more excellent information like this so that the user can make the right choices given the humongous task of finding the right function for your business.

The auther provides in depth details to the system functionality accompnaied with the needed t-codes to work out this functions.As a plant planner it helps me so far a lot to understand how to utlize the system in term of Master Data And Processing Orders as well SAP Material planning forecast based.
